ITHUTHA

Cleaning

Cleaning

- Remove dirt that you can see
- Represent a broad category of products that remove dirt and soil from surfaces.
- Cleaning doesn't kill germs; it simply removes dirt.
- Different qualities and strengths of cleaners, so buyer beware!

Sanitizing

Sanitizers (Hands and Feet)

- Isopropanol based sanitizers is the MOST affective and safe way to sanitize against envelope viruses like COVID
Minimum of 70% alcohol vol.
- Ethanol based can cause eczema, dry skin, rashes and can even trigger asthma attacks.

Disinfecting

Disinfectants (Hard services)

- Kill certain bacteria, viruses, mildews / fungi, in a specific period of time.
- Usually non alcohol based
- Non Corrosive.

Germ Specificity

- Both sanitizers and disinfectants must be tested against specific germs.
- Chemical labels must list out each of these germs individually.
- It's important to understand that a single sanitizer or disinfectant will not kill all microorganisms. Know which germs your product will work against.
- Time - Some chemical formulas kill respective germs in 3 minutes and others in just one minute or less. This is called "dwell time" and should be taken into account when choosing and using sanitizers and disinfectants for various applications.
